Science and Health

Weather · severe weather · changing environments

Remember

- **Weather** is what the air outside is like. A **meteorologist** studies weather and makes a **forecast**.
- **Thermometer**: temperature · **rain gauge**: rain · **anemometer**: wind speed · **wind vane**: wind direction · **barometer**: air pressure.
- **Severe weather:** thunderstorm, tornado, hurricane, flood, drought, hail. Stay safe: listen to warnings, stay inside, keep an emergency kit.
- Environments change by nature (floods, fires) or by people (cutting trees, pollution). Living things can **adapt**, **move** or **die**. **Endangered** = very few left. **Extinct** = none left.

Level 1 · Easy ★

1 Match the tool with what it measures.

thermometer	• •	**wind direction**
rain gauge	• •	**temperature**
anemometer	• •	**amount of rain**
wind vane	• •	**wind speed**

2 Fill in the blanks with: meteorologist · forecast · habitat · drought

A _____ is a scientist who studies weather.

A _____ tells us what the weather will be like tomorrow.

A _____ is a long time with no rain.

A fish's _____ is the water.

3 Write T or F.

_____ A thermometer measures rain.

_____ A tornado is a spinning column of air.

_____ Extinct means there are none left.

Level 2 · Medium ★★

4 Which tool tells you how much it rained?

a) barometer b) rain gauge c) thermometer

5 What can happen during a flood?

a) Plants dry up. b) Water gets into homes. c) It snows.

6 Write N (caused by nature) or P (caused by people).

_____ a forest fire started by lightning

_____ cutting trees to build a road

_____ a drought

_____ throwing trash in a river

7 Name two things a family can do to stay safe in a thunderstorm.

Level 3 · Challenge ★★★

8 A forest is cut down. What could happen to the birds that lived there? Use *adapt*, *move* or *die*.

9 The barometer shows the air pressure is going down fast. What could the meteorologist predict?

10 Why is a drought bad for farmers?

11 Explain the difference between **endangered** and **extinct**.

Review the class vocabulary list in the textbook.

Awesome! You finished Science and Health.

Respuestas · Science and Health

PARA EL ADULTO

Los números coinciden con los del repaso. Donde dice “libre”, valorá que la respuesta tenga sentido, mayúscula y punto. Esta parte se puede separar antes de entregar el repaso.

Level 1

1. thermometer–temperature · rain gauge–amount of rain · anemometer–wind speed · wind vane–wind direction.
2. meteorologist · forecast · drought · habitat.
3. F (it measures temperature) · T · T.

Level 2

4. b) rain gauge.
5. b) Water gets into homes.
6. N · P · N · P.
7. Two of: stay inside, stay away from windows and tall trees, listen to warnings, have a flashlight and an emergency kit.

Level 3

8. Example: some birds move to another forest, some adapt and nest in other places, others may die if they cannot find food or shelter.
9. That a storm or bad weather is coming.
10. Without rain, plants and crops do not grow and animals have less water.
11. Endangered: very few are left and they could disappear. Extinct: none are left anywhere.
